INTRODUCTION

This issue of Divisional Statistics is the sixth of a series, which is designed to satisfy the increasing demands of statistical users for information concerning various areas of the State.

Previous issues have contained data for areas of the State delineated as statistical divisions and subdivisions, which were themselves mainly amalgamations of local government areas. The boundaries of these divisions and subdivisions were determined within the Australian Bureau of Statistics after extensive consultation and advice from known users of statistical data and other parties interested in regional analysis. They were designed so that information would be presented for areas of interest while also maintaining a high degree of rationality in the groupings used.

Thus, these statistical divisions represented closely allied and meaningful areas of production and community of interest. Even though homogeneity and community of interest have always been regarded, somewhat loosely, as prime determinants of regional groupings, an attempt was made when formulating these statistical boundaries to give a more precise meaning to the items used and to clarify what constitutes a region. Factors taken into account were differential living zones, patterns of retail shopping, location and nature of industry, transport routes, provincial newspaper circulation, coverage of provincial radio and television stations, spheres of activity of cultural groups and sporting associations.

Until recently there was little uniformity in the regions used by various organisations in undertaking their own functions, with Government departments and authorities and private organisations determining their own regional boundaries. This led to at least two important difficulties, namely:

- (1) Planners etc. interested in the overall development of an area found it exceedingly difficult to obtain a complete picture of the existing services and conditions in that area. When contacting individual Departments, they found dissimilarities in the areas used which often led to an inability to obtain the required information on a consistent basis;
- (2) The task of the Statistician in providing required statistical information was made virtually impossible with each organisation requiring statistics for its own arbitrarily designed areas.

In an attempt to overcome these problems, the Committee on Uniform Regional Boundaries for Government Departments (CURB) was established to investigate and report on:

"the advantages and disadvantages of requiring Government Departments with, or intending to develop, regional operations, to adopt uniform regional boundaries (and) if uniform regional boundaries are considered desirable, the Committee should recommend the criteria to be used in establishing boundaries, (and) the boundaries to be adopted....".

The Deputy Commonwealth Statistician at that time (Mr D.L.J. Aitchison) was appointed as a member of the CURB Committee. He was able to present criteria used by the Bureau in delimiting previous statistical boundaries within South Australia.

Recommendations of the CURB Committee have been accepted by the Bureau and from 1 July 1976 the Bureau has altered previous statistical divisions and subdivisions to those which were described on pages 7-14 of Divisional Statistics 1977.

The new statistical divisions are not, in every case, identical with regions prepared for use by the CURB Committee. The Adelaide and Outer Adelaide Statistical Divisions comprise four CURB Regions - Central Northern, Central Western, Central Eastern and Central Southern. Statistical information for these four CURB Regions can be obtained by aggregating subdivisions of these two Statistical Divisions. For example Urban Southern subdivision of the Adelaide Statistical Division plus Rural Fleurieu subdivision of the Outer Adelaide Statistical Division is equal to the Central Southern CURB Region.

Since the CURB Regions now form the basis of the Bureau's new statistical divisions and subdivisions it is sufficient here to briefly examine CURB criteria for delineating regions.

Regions were delimited by the CURB Committee (and hence by the Statistician) using two complementary approaches. Firstly, areas could be determined that constituted formal regions. These were distinguished by the relative homogeneity of selected aspects of the area. Specific criteria examined in this regard were:

- population distribution, density and change,
- production statistics,
- dominant occupations, industrial and rural,
- socio-economic status: ethnicity, family status,
- physical characteristics, relief, soils, climate, water availability,
- existing administrative, planning and institutional boundaries,
- existing political boundaries (e.g. local government),
- character of the urban foci or nodes.

An alternative approach used was to determine regional boundaries based on a nodal concept. Thus, nodal regions were defined based on the interaction of functional linkages with usually the regions having some nodal or focal point. In this case, criteria examined by the Committee included:

- government department service areas,
- newspaper circulation,
- telephone traffic,
- retail trading flows,
- service areas for other commercial purposes,
- traffic flows,
- population movement, temporary as in commuting and leisure trips,
or more permanent as in migration, both internal and external.

Since these approaches are to a large extent complementary, all the Committee's regions, both urban and rural show a combination of formal and nodal features. After first identifying the broad patterns of the formal attributes throughout the State, the nodal attributes as suggested by shopping patterns, newspaper circulation etc. were examined to either reinforce or else modify the original proposals. The nodal attributes were very important in delimiting the country regions.

It can be seen that there were many similarities in the way the CURB Committee delimited its regions compared with what the Bureau did to determine its old statistical divisions. Thus, it is not surprising to find that there is a deal of comparability between the old statistical divisions and those introduced here based on the CURB Regions.

The basic framework of the old and new systems for obtaining statistical divisions remains the same. In both cases, the divisions and subdivisions are mainly amalgamations of complete local government areas. Therefore it is possible to obtain a broad comparability over time based on the new boundaries by simply regrouping the local government area data contained in earlier issues of this bulletin. Such comparisons are valid for all metropolitan areas but because of the inclusion of some unincorporated areas from the north of the State (which was formerly a separate distinct region) with regions other than the new Far North Statistical Subdivision, it will not be possible to obtain an exact comparison for some country areas. However the unincorporated areas involved in this reshuffle are not densely populated and have little economic activity, which should enable users of the data to make fairly accurate comparisons.

The Adelaide Statistical Division retains exactly the same boundary now as under the old area groupings. Originally introduced by the Bureau as a basis for the publication of the 1966 Population Census results, this area boundary has remained constant since then.

B.E. LEONARD
DEPUTY COMMONWEALTH STATISTICIAN
AND GOVERNMENT STATIST

Australian Bureau of Statistics,
195 North Terrace,
ADELAIDE 5000
31 August 1979

EXPLANATORY NOTES

1. DWELLINGS

Occupied Dwelling: For purposes of the population census, an occupied dwelling is defined as any habitation occupied by a household group living together as a domestic unit, whether comprising the whole or only part of a building, and includes hotels, motels, boarding houses, hospitals and educational, religious and charitable organisations.

Unoccupied Dwelling: Includes a dwelling normally occupied but from which the usual occupants were temporarily absent on the night of the population census, a newly-completed dwelling not yet occupied, vacant dwelling available for sale or renting, and buildings constructed as dwellings but used for non-dwelling purposes on the night of the Census.

2. EMPLOYED PERSONS

Industry is defined as any single branch of productive activity, trade or service. All persons engaged in any such branch of economic activity are classified to the particular branch in question, irrespective of their own personal occupation within the industry. For example, a carpenter working for a retail store is classified to the industry of his employer; that is, commerce.

Occupation is defined as the type of work performed by an employed person.

Note: Only 50 per cent of 1976 Census schedules from private dwellings were processed. As a result of this sampling, the sum of component items may not add to the totals shown.

3. DEMOGRAPHY

Births are allocated to the local government area or unincorporated area of usual residence of mother. Where the usual residence is not in this State the birth is coded to the location of the hospital where it occurred.

Deaths registrations are allocated to the local government area or unincorporated area of usual residence. People who normally resided in another State are coded to the area in this State in which the death occurred.

4. SCHOOLS

These statistics relate to all schools and students in primary and secondary education in South Australia. Special schools and Correspondence schools are included but adult education centres, business colleges, coaching establishments and institutions providing pre-school education are excluded.

The details for government schools have been derived from information supplied by the South Australian Education Department, while those for non-government schools have been obtained from a census of non-government schools conducted by this Bureau.

5. RURAL INDUSTRIES

For 1977-78 the statistics are derived from the agricultural census returns relating to those establishments operated by legal entities whose estimated value of operations from agricultural activities was \$1 500 or more. Agricultural activity is defined as the production of agricultural commodities (including fruit and vegetables), the raising of livestock (including poultry) and the production of livestock products.

The scope of the statistics for 1977-78 differs from that of earlier years and for this reason the figures are not strictly comparable, although statistics of total agricultural production are not greatly affected.

Area of Pasture relates to that area of lucerne, clovers (all kinds), rye grasses (all kinds), cocks foot, fescue, paspalum, pharlaris, medics (all kinds), primrose, sudan and veldt used for all purposes.

Meat Cattle are those cattle kept mainly for the production of meat.

Milk Cattle are those cattle kept mainly for the production of milk or cream for sale.

6. MANUFACTURING INDUSTRIES

Manufacturing relates to the physical or chemical transformation of materials or components into new products, as specified in Division C of the Australian Standard Industrial Classification (ASIC).

The enterprise, which is the central unit from which statistical information is collected in the economic censuses, is defined as an operating legal entity.

The establishment is in general a unit covering all the operations carried on under the one ownership at a single physical location.

Therefore, a manufacturing establishment is one predominantly engaged in manufacturing activities. However, the data collected for it covers all activities of the location, namely:

- (1) The manufacturing activities primary to the industry class to which the establishment is classified.
- (2) Any other manufacturing activities (i.e. production of commodities primary to another industry class).
- (3) Any selling and distribution activities connected with the commodities produced.
- (4) Any non-manufacturing (e.g. merchandising of goods not manufactured by the establishments, extraction of raw materials for use by the establishment).

These statistics also include data relating to separately located administrative offices and ancillary units serving the establishments and forming part of the enterprise which owns and operates the establishment.

They are units such as head offices, storage premises and manufacturers' sales branches or sales offices (except those of the kind which distribute to customers from stocks held by such branches or offices, which are classified to the wholesale industry).

Details of single establishment enterprises employing fewer than four persons are excluded as their contribution to statistical aggregates other than the number of establishments is only marginal. All manufacturing establishments owned by multi-establishment enterprises regardless of employment size are included.

DEFINITIONS

Establishments at end of year: The number of manufacturing establishments which were operating at the end of June.

Persons employed: Working proprietors and employees on the payroll.

Wages and salaries: The wages and salaries of all employees employed at the establishment. Drawings of working proprietors are excluded.

Turnover: Sales of goods whether produced by the establishment or not, plus transfers out of goods to other establishments of the same enterprise, plus all other operating revenue from outside the enterprise (such as commission, repair and service revenue, bounties and subsidies on production) plus capital work done for own use, or for rental or lease. Receipts from rent, leasing, interest (other than hire-purchase), royalties and the sales of fixed tangible assets are excluded.

Value added: Turnover, plus increase (or less decrease) in the value of stocks, less purchases, transfers in and selected expenses.

7. RETAIL TRADE

The 1973-74 Census included establishments classified to subdivision 48 of the Australian Standard Industrial Classification plus cafes, restaurants, licensed premises and hairdressing establishments in Division L but excluded bread and milk vendors, shoe repairers, door to door salesmen and organisations operating vending machines.

Number of Establishments: The number of establishments which operated at 30 June 1974. These relate to establishments as such and do not include the numbers of separately located administrative offices and ancillary units.

Persons Employed includes working proprietors at end of June 1974, employees (including part-time) on the payroll of the last pay period in June 1974, and unpaid members of the proprietor's family and other unpaid helpers working at least 15 hours during the last week of June 1974. Persons employed include those working at separately located administrative offices and ancillary units in the State.

Value of Retail Sales: Sales of new and used goods to final consumers for household and personal purposes. Excluded are takings from meals, accommodation, hairdressing, repair revenue, and sales of building materials, agricultural supplies and business equipment.

8. BUILDING OPERATIONS

The values of building commenced and building completed includes the value of additions and alterations of \$10 000 and over to existing buildings but the number of alterations and additions are excluded from the numbers of dwellings completed and under construction. Minor additions, alterations, repairs and renovations, and all construction activity such as railways, bridges, earthworks, water storage, etc. are excluded. Maisonettes, town houses, duplexes, terrace houses, villa units, cottage flats, home units and flats are included in 'other dwellings'.

Value: The values shown represent the estimated value of the whole job when completed, excluding the value of land on which the job is carried out.

Commenced: A building is regarded as having been commenced when expenditure on building work is first reported.

Under Construction: A building is regarded as being under construction at the end of a period if it has been commenced but has not been completed and work on it has not been abandoned.

Completed: A building is regarded as having been completed when it is reported as completed, or in the case of owner-builders is reported as completed or substantially completed and occupied.

9. LOCAL GOVERNMENT FINANCE

Ordinary Services: Includes the general functions of local government authorities, but excludes details of their trading activities such as electricity undertakings.

Rates & Penalties: Includes general rates, special or local rates and payments in lieu of rates.

Roads, Streets, etc.: Expenditure incurred by local government authorities only. Includes expenditure on drainage associated with roadworks.

SYMBOLS USED

Throughout this bulletin the following symbols have been used:

F	failure
n.e.c.	not elsewhere classified
n.p.	confidential information, not available for publication
p	preliminary
-	nil, or less than half the final digit shown
..	not applicable

ROUNDING

Where figures have been rounded, discrepancies may occur between sums of the component items and totals.
